

ReFrame and Zoom Integration

By connecting your ReFrame Engage account to your Zoom account, you can simply and easily connect with your customers and reduce the manual effort in sending Zoom meeting details for your engagement. Upon scheduling a meeting with your customers, ReFrame Engage will automatically generate a unique Zoom link and dial-in details. The below video will show you how it works:

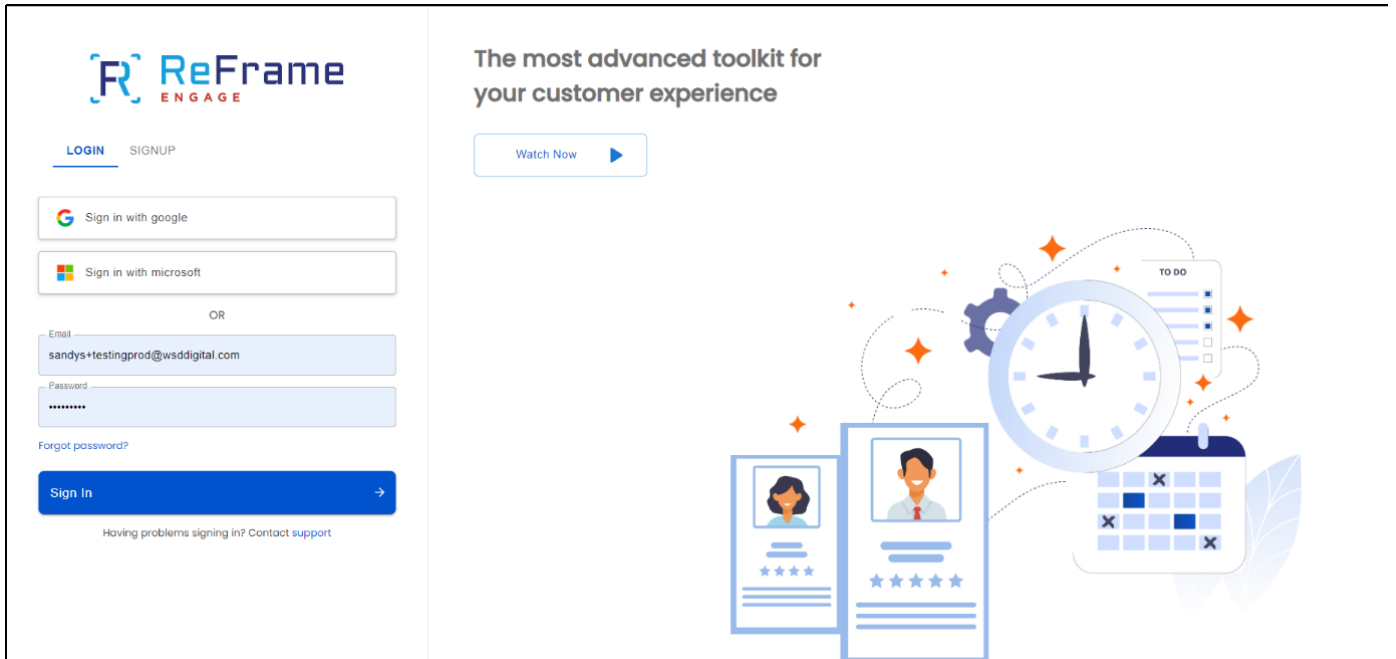

Steps on how to connect your Zoom Account and schedule a meeting with video conferencing

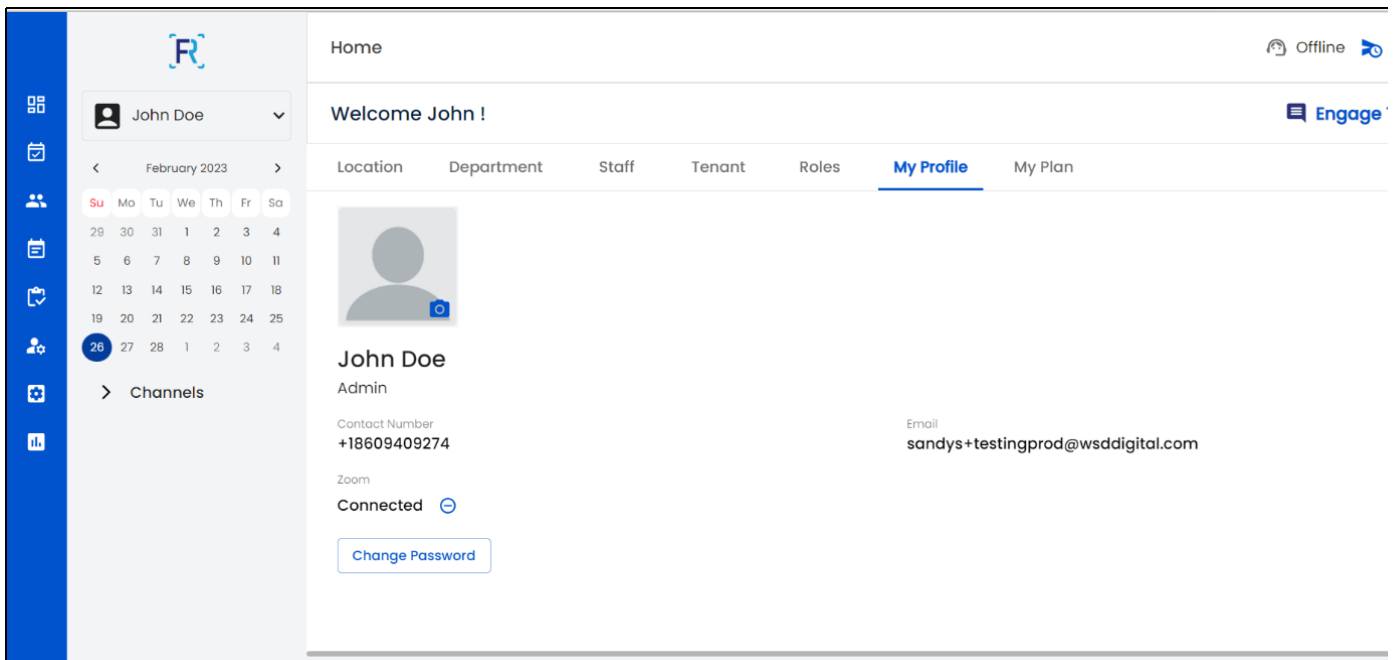

Steps to add your Zoom Account to ReFrame Engage

ReFrame will configure Zoom integration capability into your company account upon onboard to the ReFrame Engage system. Your company will automatically have the option of connecting your personal Zoom accounts upon:

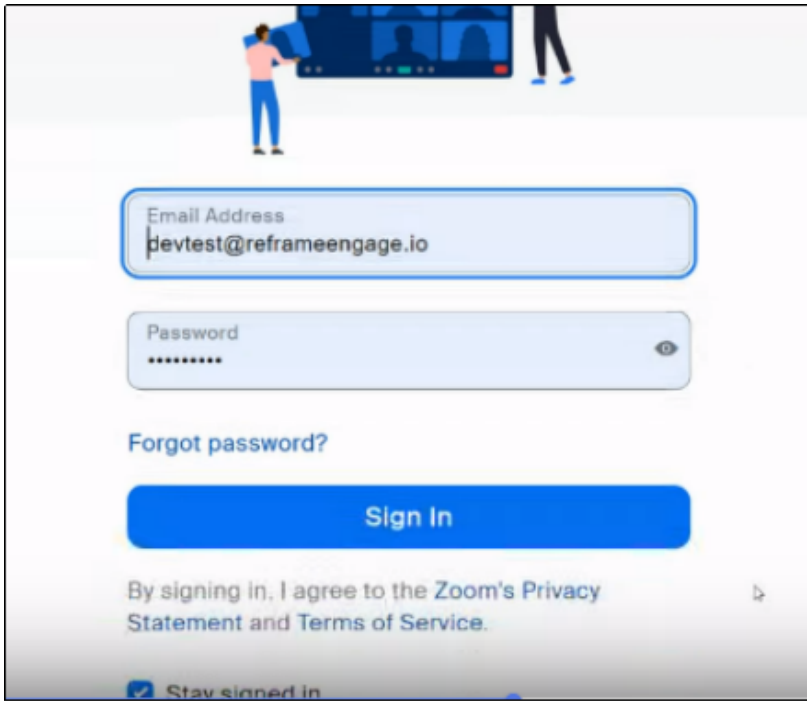

Logging into the system after you have been added as a user to the ReFrame Engage System

Once logged in, go to your profile, select the plus icon next to (not connected). By selecting the plus icon you can switch your connectivity to on/off.

Once clicked you will be prompted for a onetime login on your personal zoom account. This will always be connected until you disconnect the Zoom account under your profile.
